timeXtender 4.5 Now Available

Taking a major step in to the enterprise Business Intelligence market, timeXtender today announced the release of timeXtender 4.5., the latest version of timeXtender's data warehousing and cube building tool that eliminates the need for massive coding.

timeXtender 4.5 is a powerful upgrade and delivers substantial performance improvements as well as new adapters that simplify the process of extracting data from SAP R/3 and Microsoft Dynamics GP.

"timeXtender 4.5 enables Business Intelligence for all sizes of companies," said Heine Krog Iversen, timeXtender CEO. "The high level of abstraction in timeXtender ensures that Business and IT can work together to design a flexible and wellarchitected BI solution that is of immediate value to the business users. "

"In timeXtender 4.5, we've made it easy for organizations that use SAP R/3 to build Microsoft SQL Server based BI projects," said Thomas Christiansen, timeXtender CTO. "We've also implemented hashed values, minimized the storage requirements, and performance tuned features such as user-defined functions and incremental updates. With this release, we once again push the limits for meta-data generated BI."
