## timeXtender and Theobald Software Announce OEM Agreement

timeXtender®, a leading provider of Business Intelligence tools, and Theobald Software, a leading provider of SAP interface products, sign OEM agreement. The agreement allows timeXtender to use Theobald Software's Xtract IS interface in timeXtender's SAP adapter. The agreement answers a request from customers for easy extraction of SAP R/3 data into timeXtender.

"This agreement offers customers that use SAP an easy way to build a Microsoft SQL Server based BI project in timeXtender. Until now it has been a labor intensive project to migrate data from SAP R/3 to SQL Server; however, the new SAP adapter in timeXtender makes this easy and straightforward," says Heine Krog Iversen, CEO of timeXtender. "This agreement also shows timeXtender's constant dedication to revolutionize how people work with BI - regardless of which IT systems they are using."

Using the SAP adapter in timeXtender, data can be extracted from SAP R/3 data sources into a data warehouse in timeXtender. In timeXtender, the data can then be cleansed and combined with data from other sources.

"We believe this will be a very valuable agreement for both companies," says Patrick Theobald, CEO of Theobald Software. "Xtract IS is developed by Theobald Software specifically to integrate SAP R/3 systems with SQL Server Integration Services - which is utilized by timeXtender - and Xtract IS is based on certified technology. As all our products, Xtract IS is Made in Germany and is therefore of high quality and reliability."
